ARCHERY CRITIC.

Record the arrow build.

Gather the inputs before selecting a spine.

Complete with a fitter using the current instructions for the exact shaft family. Leave unknown inputs unresolved.

- [ ] Confirm the fitted bow configuration.
- [ ] Record measured draw weight and how it was measured.
- [ ] Have an appropriate arrow cut length checked by the shop.
- [ ] Use the maker's definition of length and keep the units.
- [ ] Identify point, insert, nock and fletching configuration.
- [ ] Confirm the complete build before ordering or cutting.

Bow model / style / fitted configuration

Measured draw weight / method / units

Shop-confirmed arrow cut length / definition

Shaft maker / family / candidate spine

Point / insert / nock / fletching

Selector URL / version or date / result / fitter check

This sheet does not calculate a spine or cutting length. Do not substitute draw length for arrow cut length.
